What is Auto Scaling?

- Amazon EC2 Auto Scaling is a component that helps you ensure that you have the correct number of Amazon EC2 instances available to handle the load for your application.
- Auto Scaling adds or removes instances to keep your system steady state.
- You can automate the increasing or decreasing of virtual machines depending on your policy.

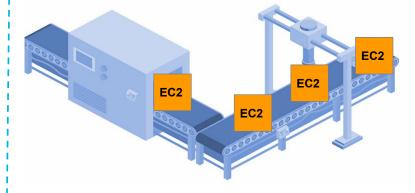

Auto Scaling vs Load Balancer

Distributing the traffic across the existing instances

- Launch new instances
- Terminate the existing instances
